OS PROPERTY MAP MODULE

SPEED LOADING
FLEXIBLE FILTERING
REPONSIVE LAYOUT
SUPPORT BING AND GOOGLE MAP

Introduction

OS Property Map is one of many great OS Property modules. It's the most powerful, simple and usable way to show properties on Google Map or Bing Map on your site. This module provides the new Google/ Bing Maps design, multiple maps, custom markers and a great user interface. Our goal is to provide the functionality you need and show just the correct amount of properties as configured.

Here are unique features of module

Uses Google Maps API V3

Includes Bing Map

Supports multilingual (as OS Property)

Supports Responsive layout

Power Configuration with Flexible data filtering

Speed up your site loading with Cache feature

For using the OS Property Map module, you should only download and install the .zip file:

Access the Joomla Extension Manager

The first thing you need to do is to login to the administrative area of your Joomla website. Once you do that, access the Joomla Extension Manager by going to **Extensions -> Extension Manager**.

Once you open the Extension Manager, you have three options to choose from to install your extension. In most cases, you should go for the first option but it's good to know that there are alternatives.

Option 1: Upload Package File

This is one of the most convenient options available. All you need to do is hit the Browse button, browse to the location of your module archive file on your local computer, and press the Upload & Install button.

Option 2: Install from Directory

Depend on your PHP Setting, that exceed in size the server PHP Upload File size limitation and cannot be uploaded through the previous method. Module must be uploaded via FTP to a folder in your hosting account since FTP can transfer much bigger files.

Once you have uploaded the module directory to your hosting account, go to the Extensions Manager and specify the path to that folder. Finally, press the Install button. Joomla 3 will check the folder you've specified and install the module if it is uploaded correctly.

Install from Directory

Install Directory

Install

Option 3: Install from URL

The third available option for module installation is directly through a URL. All you need to do is to enter the direct address of the zip archive with the module and press the Install button. Joomla 3 will download, extract and make the necessary installations for you.

Install from URL

Install URL

Install

After installing the plugin, you must activate it from **Modules manager**

Search	<input type="button" value="Q"/>	<input type="button" value="X"/>	Position	Ascending	20			
<input type="checkbox"/>	Status	Title	Position	Type	Pages	Access	Language	ID
<input type="checkbox"/>	<input checked="" type="checkbox"/>	OS Property Map	slideshow	OS Property Map	Selected only	Public	All	180

Module parameters

Parameters	Description
Basic parameters	
Use Bootstrap	This field is important in showing content of property details on the map. Depend on the Bootstrap library that your template is using. You must select corresponding value at this drop-down select list. There are 3 options : Bootstrap 2 (is being used in Joomla 3.x default), Bootstrap 3 (is being used in some Template framework like T3) and Not using (in this case, module will load Bootstrap lib of OS Property extension)

Width of Map (px/%)	Width size of Map, in pixel or percent
Height of Map (px)	Height size of Map, in pixel
Max Properties	In case your system has a lot of properties, please enter Max properties that will be shown on the Map to reduce the loading speed. Put 0 or leave it empty if you want to show all Properties
Zoom level	Default Zoom level of Maps
Map Type	You can select Google Map or Bing Map
Bing API	If you want to use Bing Map, please enter Bing API
Google Map Type	Road map Satellite Hybrid Terrain
